ABSTRACT

To determine the current state of the art of the teaching of vocational ethics in the state of Illinois, a survey of Illinois educators was conducted in the spring of 1985. A sample of 650 teachers were asked if and to what extent vocational ethics were currently being taught in their scate. About 50 percent of the teachers, kindergarten through postsecondary, responded. Of these respondents, 78 percent regarded vocational ethics as an appropriate area of instruction, and 92 percent agreed that understanding vocational ethics would help students obtain and keep a job after graduation. However, only 21 percent reported that vocational ethics are currently being taught in their schools. Many Illinois educators believe that vocational ethics should be introduced to students early in the school career. Of the areas selected by the respondents as currently including the teaching of vocational ethics, career education was selected most often. While most reported that a course on vocational ethics was not available at their schools, indirect teaching through teacher-student interaction was reported by many. Nearly all the educators indicated that they currently include vocational ethics at least occasionally in their curriculum. While there was strong agreement on the importance of the topic, there was little agreement on the teaching of vocational ethics as a specific course. As a group, Illinois educators favored teaching vocational ethics indirectly over teaching a specific course. About two-thirds of this report consists of copies of the computerized data files of the study survey, (KC)

Final Project Report position of policy Vocational Ethics Infusion Project Submitted by: Pamels F. Miller, Ph.D., Project Director June 30, 1985

Funding Agreement: R-31-15-x-0367-522

PERMISSION TO REPRODUCE THIS MATERIAL HAS BEEN GRANTED BY

Project Title: Vocational Ethics Infusion Project (VEIP) 2.

Project Director: Pamela F. Miller 3.

TO THE EDUCATIONAL RESOURCES 4. Funded Agency: Norris City-Omaha Community Unit District #3 INFORMATION CENTER (ERIC)

5. Time Period: July 9, 1984-June 30, 1985

o. Cost of Project Expenditures from July 9, 1984-June 30, 1985: \$41,737

7. Activities:

Conducted Review of Literature Developed and refined lis. of Ethical Characteristics Developed Q-Sort research design for pilot study Administered Q-Sort surve, to 107 vocational educators at AVA convention in New Orleans Analyzed results of Q-Sort Survey Developed report of results of Q-Sort Survey Disseminated results of Q-Sort Survey via article to Journal of

Industrial Arts Education Developed survey instrument to assess current status of teaching vocational ethics in Illi bis Schools

Conducted stratified random survey of K-post secondary teachers (N=650)

Analyzed results of Illinois educator survey Developed report of results of survey (enclosed)

Developed an edited transcr t of Conference on Future World of Work

Disseminated transcript of occeedings to participants Obtained corrections and re ommendations from participants Conducted workshop on Project goals and objectives, 05/22/35, University of Illinois, Chicago Campus

8. Concerns: Replacement of Research Assistant

Dissemination Planning Cutline: Report results of Illinois educator curvey to appropriate audiences

10. Impact Statement: The impact of the VEIP project during the first project year includes the development of a working model of vocational ethics, the identification of the way vocational educators perceive a variety of ethical characteristics, the development of a draft of the proceedings of the Conference of the Future World of Work, and an assessment of the current status of teaching vocational ehtics in Illinois schools.

11. Meetings Attended: Annual Meeting of the Members of the American Vocational Association, New Orleans, Louisiana November 30- Dec 2, 1984

BEST COPY AVAILABLE

BEST COPY AVAILABLE

12. Meetings Conducted: Workshop on Project Goals and Activities, May 22, 1985, University of Illinois, Chicago Campus

13. Activities Planned:

Employ research assistant by September 1, 1985

Develop a more concise version of the Froceedings of the Future World of Work and acquaint appropriate audiences with report availability Reconstitute advisory committee

Convene advisory committee and review results of Illinois educator survey Based on recommendations of the committee, develop a strategic plan for pilot testing

Select pilot test sites

Pilot test selected aspects of plan

Report results of pilot tests

Conclude project with a plan for the infusion of vocational ethics in Illinois Schools

Disseminate plan to appropriate audiences

14. Appendices: Report of Survey of Illinois Educators

The Teaching of Vocational Ethics in the State of Illinois: A Survey Report

To determine the current "state of the art" in the teaching of vocational ethics in the state of Illinois, a statewide survey of Illinois educators was conducted in the spring of 1985. Teachers were asked if and to what extent vocational ethics was currently being taught in the state of Illinois. Vocational ethics was defined as:

Vocational ethics is the study of ethical conduct in the workplace. An individual's work ethic refers to the beliefs, values, and principles that guide the way an individual carries out job responsibilities.

A stratified random sample of Illinois educators from the kindergarten through post-secondary level was obtained through the Department of Adult, Vocational, and Technical Education. The sample was selected on the basis of four teaching levels, elementary career educators, and co-op coordinators. Within each group 100 or 150 teachers were randomly selected. The total sample was 650.

The questionnaire was developed by the VEIP Project staff based on the information sought on the teaching of vocational ethics. In addition, twenty characteristics rated by a nationwide sample of vocational educators in Desamber, 1984 as important worker characteristics were included to evaluate their importance to educators at the kindergarten through post-secondary level. Basic demographic information was also requested. The four page questionnaire was mailed to each educator with a stamped addressed return envelope and a cover letter requesting cooperation by completing the questionnaire.

Of the 650 questionnaires mailed, 11 were returned as non-deliverable yielding a sample of 639 respondents. During a six week period, 307 usable questionnaires were returned for a respondent rate of 48 percent. The return rate for each group is listed in the table below:

	Original Sample	Number Returned	Actual Sample	Number Completed
Mailing Group				
Elementary	100	0	100	45 (45%)
Junior High	100	0	100	40 (40%)
Elementary Career Educators	100	0	100	55 (55%)
Co-op Coordinators	150	2	148	86 (58%)
High School	100	2	98	59 (60%)
Post-Secondary	100	7	93	22 (24%)

The sample was about evenly divided between women, 46%, and men, 54%. However, the women respondents tended to be concentrated in elementary schools, 27%; high schools, 21%; and as co-op coordinators, 21%. The men were more likely to be in elementary career education, 24%, or a co-op coordinator, 33%.

Approximately 63%, 184, of the sample had earned masters' degrees with another 29%, 84, possessing a bachelor's degree. Four percent reported holding an educational specialist's degree, three percent a Ph.D., and three percent did not respond.

Due to the nature of the elementary career educators and co-op coordinators positions, the sample can also be described by the types of settings in which the respondents are employed. The following table illustrates the different kinds of settings each mailing group represented.

	Elem	MAIL Jrhi	ING LIST ECE	GROUP HS	Post HS	CC
TYPE OF SETTING						
Elementary	40		7			
Junior High		31	4	3		1

Community College					15	1
Elementary/Jr. High	3	4	3		1	
Unit District K-12	2	5	15	2		5
* ECE = Elementary CC = Co-	Carcer E		Post	HS = Po	st-secondery	,

In addition, there were eight respondents employed in the state mental health agency, area vocational centers, universities, adult vocation, and the adult division of the correstions system, re pecitvely.

The number of years of teaching ranged from two in their first year of teaching to one with 40 years experience. The average was 15 years.

The achool districts represented by the sample tended to range from the smallest, under 500, to those with almost 5,000. Fifty, 18%, reported being employed in a district with an enrollment of 500 or less. Fifty-seven, 20%, were employed in the 500 to 999 range and an additional 56, 20%, were in the 1,000 to 2,499 range. Another 16%, 45 respondents, stated their district enrollment to be between 2500 and 4,999. The next largest group, 26 or 9%, had an enrollment greater than 20,000 students.

Most of the educators agreed that at least one of the roles of the public schools should be to prepare students to enter the world of work. Ninety percent indicated agreement or strong agreement with the statement: "The role of the schools is to prepare students to enter the world of work."

Vocational ethics was not viewed as an inappropriate topic for the public schools in Illinois. Seventy-eight percent responded that vocational ethics is an appropriate area of instruction.

Educators apparently found understanding vocational ethics as extremely important to obtaining and maintaining a job after graduation as 92% chose strongly agree or agree for the statement: "An understanding of vocational ethics will help my students obtain and maintain a job when they graduate from school."

While Illinois educators rate vocational ethics as being important, only 21% reported that it is currently being taught in their school. As might be expected, of this 21%, nearly half, 42%, were co-op coordinators. Similarly, another 19 percent were elementary career educators and 21% were high school teachers.

Many Illinois educators believe vocational ethics should be introduced to students early in the school career. Twenty-two percent chose kindergarten and 26% chose first grade as appropriate levels. The mildle school years were also selected by some---11% at the sixth grade level and 10% at the seventh grade level.

Few of the content areas were selected b, the respondents as currently including the teaching of vocational ethics. As might be expected, career education was selected most often.

Content Areas and Frequencies (n=307)

While most reported that a course on vocational ethics was not available at their school, indirect teaching through teacher-student interaction was reported by many. Forty-seven percent responded "most of the time" and 33% responded "some of the time" to the statement: "Vocational othics is indirectly conveyed through daily interactions between students and teachers. Again, the elementary career educators, co-op coordinators, and high school teachers tended to comprise this group. Another 14% selected "all of the time."

Nearly all the educators indicated that they currently include vocational othics at least occasionally in their curriculum. The high school, post-secondary, and co-op coordinator groups tended to select all, most, and some of the time more than the elementary and junior high groups.

	Elem	JrHi	ECE	нѕ	Post HS	CC
All of the time	5%	5%	6 %	195	40 %	21%
Most of the time	7%	10%	18%	25%	35%	45%
Some of the time	37%	15%	40%	52 %	0%	24%
Occasionally	40%	48%	26%	23%	15%	10%
Never	123	23%	10%	2%	10%	1%

When queried about the best way to teach vocational ethics, 39% selected "by observing others behavior" and "on the job." An additional 37% selected these two plus "as a separate school subject." Few indicated that only one method would be satisfactory.

While there was strong agreement about the importance of vocational athics, there was little agreement on the teaching of vocational ethics as a specific course. Thirty-seven percent disagreed and 21 percent expressed no opinion. Only ten percent indicated strong agreement and another 27 percent chose "agree". There were five percent who strongly disagreed. In general, 37 percent agreed, 41 percent disagreed and 21 percent had no opinion. The range and strength of the disagreement among educators is demonstrated in the table:

^{*} indicates percent of group

Illinois educators as a group favored teaching vocational ethics indirectly over teaching a specific course. Almost the entire sample, 94%, thought vocational ethics should be indirectly taught through the daily interactions between students and teachers.

	Specific Course	Taught Indirectly
Strongly Agree/Agree	111	283
Strongly Disagree/Disagree	125	8
No Opinion	63	10

When educators were asked which content areas that vocational ethics should be taught in, not surprisingly career education was chosen by 238. The other content area selected by a large number (127) was social studies.

Content Areas and Frequencies (n=307)

Illinois educators as a group seem to believe that there is adequate time within the school day to teach vocational othics. However, within the different groups, this is not necessarily true. For the entire sample, 53% stated they had enough time while 37% did not. The upper levels indicated nore time available than the elementary and junior high groups.

	Elem	JrHi	ECE	HS	Fost HS	cc
Strongly Agree/Agree	318	31%	40%	66%	623	72%
No opinion	217	1,3%	3.3	45	55	7%
Strongly Disagrae/ Disagrae	48%	5.7	527	31%*	34%	21%

^{*} may add to more than 100% because of rounding

Only five percent responded that they had all the materials needed to teach vocational ethics. Although 24% indicated they had most and 26% indicated they had some of the materials necessary, 29% stated they only had a little and another 17% that they had none.

Over half stated that there would be minimal to strong administrative support for support the teaching of vocational ethics in their district. However, nearly 42% did not know what kind or if there would be any.

Although 42% reponded that there would be varying amounts of parental support, 51% indicated that they did not know what parental support there might be in their district.

A larger percentage, 45, did not know if the community would support the teaching of vocational othics although 50% reported there would community support of some kind.

On the question of feeling committent to teach vocational ethics, over half, 60%, responded feeling competent to do so. It should be noted, however, that 22% expressed no opinion.

Although over half believe they are competent to teach vocational ethics, 49% indicated that their college coursework did not prepare adequately prepare them to do so. Thirty-three percent stated their college work had been adequate.
